

RE Suite

Complete insight and control over your real estate information

The RE Suite allows you to collect, structure, analyze and disseminate your real estate information. A complete software solution, which allows various parts to be easily automated. The software is modular in design and can be implemented in a modular system.

MONITORING AND UNDERSTANDING

The entire real estate development and - management cycle is functionally supported by the RE Suite. The RE Suite makes your work more efficient and effective with applications such as real estate development, real estate control, asset and portfolio management, Maintenance (NEN 2767), financial exploitation, energy and security. You have continuous insight into your real estate information and therefore full control and grip on your real estate portfolio.

COLLECTING INFORMATION

The RE Surveying software, allows data to be collected, accessed and controlled "out in the field". Whether it is fire safety, condition assessment (NEN 2767), mutation maintenance or other aspects, it can all be entered by the same surveying software on iPad or tablet PC.

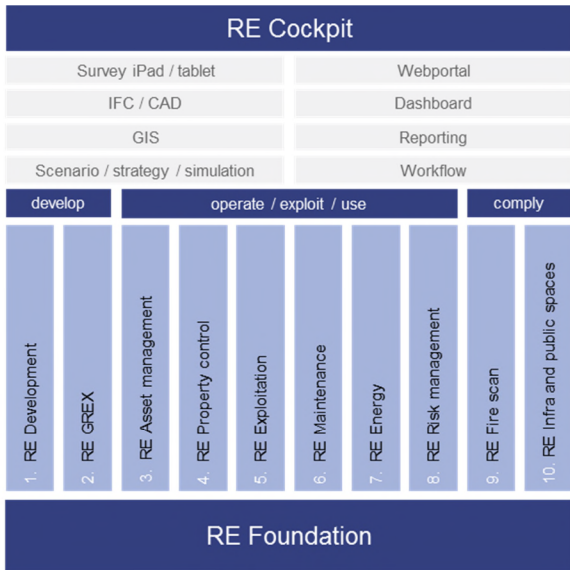

FEATURES

- **Portal at every level:** everyone in the organization has control capabilities at its own level and continuous insight
- **Reporting at every level:** generate standard and individual composed reports in Word, Excel or PDF.

- **Default, but configurable.** The RE Suite is tailored to specific needs, making the standard software provide a customized solution.
- **Techniques and standards:** The RE Suite uses and connects with modern techniques and standards: BIM, CityGML, GIS, etc.
- **Individual layout:** layout can be adapted to the needs of the individual user for creating support and familiarity with the software.
- **Users:** multi-user application, even in different locations. Access rights are customizable by the application manager.
- **Release management:** new versions of the RE Suite take into account specific settings and extensions of the customer, making the customized solution preserved for the client and the investment in time and energy intact

MODULAR SETUP

The functional structure of the RE Suite contains three tiers:

1. RE Foundation;
2. RE Applications;
3. RE Modules

The RE Foundation Server consists of the data model, links to other external sources and ERP and administrative systems.

From the RE Foundation you can manage your data, such as the objects, components, encoding and the users of the system.

The second tier of the RE Suite is the application tier, containing applications as Asset management, Maintenance, Property Control etc.

The third tier contains generic modules such as web portal, GIS, reporting etc. They can be implemented and used separately from the applications.

SUPPORT

DEMO Consultants offers a telephone support during business hours and a web helpdesk, to support the users of the RE Suite.

USERS GROUP

DEMO stimulates active participation of users to the user group. During a users-day you can exchange experience and knowledge with fellow users, ascertain what changes in the software are made and what is planned in the release calendar.

CONTINUOUS DEVELOPMENT

The software is continuously developed. You can be sure that the software is always up to date.

INSTALLATION

RE Suite is sold per license or offered as SaaS (where the number of users is unlimited). The software is suitable for client-server environments, cloud application, but also can be used on a stand-alone PC.
